

Take for example,

**An image of our 6 team members having our Sunday meeting in the Library**

The image and thumbnail are saved in the container as:

**“images/fvega/groupmeeting.png” and “thumbnails/fvega/groupmeeting.png”**

*All column datatypes are Strings (varchar) unless denoted by (###) which indicates a numerical value*

**Image:**

id	user	lat (###)	lon (###)
fvega/groupmeeting.png	fvega	100.0	111.0

**User:**

id	email	password	firstName	lastName
fvega	Fvega3@calstatela.edu	Fasd;lkfj182u31kjhklkbnx897	Felipe	Vega

**Attribute:**

id	question
Number of People	How many people are in the image?
Topic	What was the topic of the meeting?
Meeting Location	Where did the meeting take place?

**Context:**

id	descriptor
Meeting	The image depicts a meeting between multiple people

**Context-Attribute:**

id	context	attribute
Alsdkfjas;ldfk102932109	Meeting	Number of People
Asdasldkfj209481-0239	Meeting	Topic
23941-0afskdfjasd;lkfj	Meeting	Meeting Location

**ICAV (Image-Context-Attribute-Value):**

id	image	context	attribute	value
213p941alksdfja;sdlkfj	fvega/groupmeeting.png	Meeting	Number of People	6
123948120-3;lksDJFA	fvega/groupmeeting.png	Meeting	Topic	Senior Design
Oqwpeiurxmcnxz2134	fvega/groupmeeting.png	Meeting	Meeting Location	CSULA Library
